(54) Title: METHOD OF INPUTTING A CHARACTER USING A SOFTWARE KEYBOARD

(57) Abstract: The present invention relates to a method of inputting a character using a software keyboard, and more particularly relates to a method of inputting a character using software keyboard used for inputting a character of mobile terminal (such as, PDA) using touch screen. The method for inputting a character using a software keyboard comprising a certain number of blocks, each of capital characters being assigned to the respective blocks, and peripheral character block being located at peripheral regions of each of the blocks and being activated when a corresponding capital character block is touched according to the invention comprise the step of: inputting the capital character by touching a capital character block to which a character to input is assigned; and, inputting the character of peripheral character block by touching a capital character block to which a character to input belongs and by dragging to a corresponding peripheral character block. Hence, it is not necessary to arrange all of keys on keyboard as prior art such that mistake is prevented and further the eye becomes not fatigued.
